

PRODUCT DESCRIPTION

SPECTEC's Proximity/Zero Speed sensors are designed to switch in the presence of a low magnetic field. Bi-polar(north and south activation) is standard. Uni-polar (single pole activation) and Bi-polar latching (alternating pole activation) are also available.

The standard output is NPN Supply Tracking 0-Vs, provided from a 3k Ohm internal pull-up resistor to a collector, which can sink 25 mA. The output is normally high with no target present. Other output signal options are available; please see Page 2 for details.

For intrinsically safe versions refer to bulletins: IS160 & IS161.

SPECIFICATIONS

Orientation:	Single: No orientation required. Dual: For directional applications, the alignment mark must be in line with the rotation of the target. For synchronous output, the alignment mark should be at a right angle to the rotation of the target.
